

☆☆☆ Day 134 ☆☆☆

of Our Daily UiPath Q&A Challenge!

Welcome to Day 134 of our exciting
UiPath Q&A Challenge! Each day,
we'll be answering one key question
to help you master UiPath and
revolutionize your automation
journey. 🚀

➡ Question for Today

What activity is used to read data
from an Excel file into a DataTable?

In UiPath, to read data from an Excel file into a DataTable, the activity you use depends on whether you're working with Excel activities or Workbook activities.

1. Using Excel Activities (requires Excel to be installed):

- Activity: Read Range (under Excel category)
- Container: Place it inside an Excel Application Scope
- Output: Data is stored in a DataTable variable

2. Using Workbook Activities (does not require Excel to be installed):

- Activity: Read Range (under Workbook category)
- No need for Excel Application Scope
