

☆☆☆ Day 144 ☆☆☆

of Our Daily UiPath Q&A Challenge!

Welcome to Day 144 of our exciting
UiPath Q&A Challenge! Each day,
we'll be answering one key question
to help you master UiPath and
revolutionize your automation
journey. 🚀

🚫 Question for Today

How do you append data to an
existing Excel sheet without
overwriting?

To append datatable to an existing Excel sheet without overwriting in UiPath, you can use the "Append Range" activity.

✅ Steps using Excel activities (when Excel is installed):

1. Use Excel Application Scope – provide the path of the Excel file.
2. Inside the scope, use Write datatable to excel activity.
3. Set:
 - Sheet name: The sheet where data should be appended.
 - DataTable: The data you want to append.
 - Mark Append property as True

◆ This will automatically find the next empty row and insert the data there.

✅ Steps using Workbook activities (Excel not installed):

1. Use Append Range (Workbook) activity.
2. Provide:
 - File path
 - Sheet name
 - DataTable

⚠ Workbook activities don't support formulas or formatting but work without Excel installed.
