

🌟🌟🌟 Day 137 🌟🌟🌟

of Our Daily UiPath Q&A Challenge!

Welcome to Day 137 of our exciting
UiPath Q&A Challenge! Each day,
we'll be answering one key question
to help you master UiPath and
revolutionize your automation
journey. 🚀

🚫 Question for Today

What happens if the Excel file does
not exist when using 'Write Datatable
to Excel' inside Excel Application
Scope?

✗ By Default: It Throws an Error

- The Excel Application Scope expects the file to exist.
- If the file path you provide doesn't exist, UiPath throws a `FileNotFoundException`.

✓ How to Handle It Gracefully

If you want to create the file if it doesn't exist, you have below solution:

Switch to modern Excel activities and wrap your logic in a Use Excel File activity. In its properties, set “Create if not exists”. UiPath will then create the file automatically whenever the specified file is missing.
