🌟🌟🌟 Day 138 🌟🌟🌟
of Our Daily UiPath Q&A Challenge!

Welcome to Day 138 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

How do you add a new sheet to an existing Excel?

🛠️ **Steps to Add a New Sheet in UiPath:**

1. Use the "Excel Application Scope"
   - Set the path to your existing Excel file.
2. Inside the Excel Application Scope, use the "Insert Sheet" activity:
   - Set the SheetName property to the name you want for the new sheet (e.g., "NewSheet").
   - If you leave it blank, it will create a sheet with a default name like "Sheet1", "Sheet2", etc.

📝 **Notes:**

- If the sheet already exists, it will throw an error. You can handle this using a **Try-Catch** block.
- To check if a sheet exists before adding, you can use **Workbook activities** and read the sheet names.
